

# DIN Standard compliant Ball Screw (DIN69051)

Models EBA, EBB, EBC, EPA, EPB and EPC

Fig.1 DIN Standard (DIN69051) Compliant Precision Ball Screw

<b>Point of Selection</b>	<b>A15-8</b>
<b>Options</b>	<b>A15-352</b>
<b>Model No.</b>	<b>A15-369</b>
<b>Precautions on Use</b>	<b>A15-374</b>
<b>Accessories for Lubrication</b>	<b>A24-1</b>
<b>Mounting Procedure and Maintenance</b>	<b>B15-104</b>
Lead Angle Accuracy	<b>A15-11</b>
Accuracy of the Mounting Surface	<b>A15-14</b>
Axial Clearance	<b>A15-19</b>
Maximum Length of the Screw Shaft	<b>A15-24</b>
DN Value	<b>A15-33</b>
Support Unit	<b>A15-316</b>
Recommended Shapes of Shaft Ends	<b>A15-324</b>
Dimensions of Each Model with an Option Attached	<b>A15-360</b>

## Structure and Features

---

In the DIN standard compliant Ball Screw, balls under a load roll in the raceway cut between the screw shaft and the nut while receiving the axial load, travel along the groove of a deflector embedded inside the nut to the adjacent raceway, and then circulate back to the loaded area. Thus, the balls perform infinite rolling motion.

Two types of nuts are available: model EB of oversized-ball preload type or non-preloaded type, and model EP of offset preloaded type.

### [Compact]

This Ball Screw is compactly built. Because of an internal circulation system using deflectors, the outer diameter of the nut is 70 to 80% of the conventional double nut and the overall nut length is only 60 to 80% of the return pipe nut.

### [Compliant with a DIN standard]

The nut flange shape, mounting holes and rated load are compliant with DIN69051.

---

## Types and Features

---

### Models EPA/EBA

[Flange shape: round-flange type]

Specification Table⇒ [A15-94](#)/[A15-88](#)

---

### Models EPB/EBB

[Flange shape: type with two cut faces]

Specification Table⇒ [A15-96](#)/[A15-90](#)

---

### Models EPC/EBC

[Flange shape: type with one cut face]

Specification Table⇒ [A15-98](#)/[A15-92](#)

## Accuracy Standards

The accuracy of DIN standard compliant Ball Screw is controlled in accordance with ISO standard (ISO3408-3) and JIS standard (JIS B1192-1997). C, Cp and Ct grades are defined for this Ball Screw series.

Grade C (see page **A15-11**)

Grade Cp, Ct (see ISO 3408-3)

Grade	0	1	2	3	5	7
C	○	○	○	○	○	○
Cp	—	—	—	○	○	—
Ct	—	—	—	○	○	○

## Model EBA (Dimensional Table of Model EBA Oversized-ball preload type or non-preloaded type)

Hole type 1  
(Model EBA1605 to 3210)

Hole type 2  
(Model EBA4005 to 6320)

Model No.	Screw shaft outer diameter d	Lead $\ell$	Ball center-to-center diameter dp	Thread minor diameter dc	No. of loaded circuits Rows x turns	Basic load rating		Rigidity K N/ $\mu$ m

75	110	134	16	108	27	2	93	11	42.5	M8×1	
90	125	119	18	96	18	2	108	11	47.5	M8×1	
95	135	136	18	108	27	2	115	13.5	50	M8×1	

Note) The rigidity values in the table represent spring constants each obtained from the load and the Elastic Deformation finish when providing an axial load 24% of the basic dynamic load rating (Ca).

These values do not include the rigidity of the components related to mounting the nut. Therefore, it is normally appropriate to regard roughly 80% of the value in the table as the actual value.

If the axial load (Fa) is not 0.24 Ca, the rigidity value (K<sub>N</sub>) is obtained from the following equation.

$$K_N = K \left( \frac{Fa}{0.24Ca} \right)^{\frac{1}{3}}$$

K: Rigidity value in the dimensional table.

## Model EBC (Dimensional Table of Model EBC Oversized-ball preload type or non-preloaded type)

90	125	142	18	119	18		2	108	11	M8×1

Note) The rigidity values in the table represent spring constants each obtained from the load and the elastic deformation when providing a preload 8% of the basic dynamic load rating (Ca) and applying an axial load three times greater than the preload. These values do not include the rigidity of the components related to mounting the nut. Therefore, it is normally appropriate to regard roughly 80% of the value in the table as the actual value.

If the applied preload (Fa0) is not 0.08 Ca, the rigidity value ( $K_N$ ) is obtained from the following equation.

$$K_N = K \left( \frac{Fa0}{0.08Ca} \right)^{\frac{1}{3}}$$

K: Rigidity value in the dimensional table.

Note) ★ Basic Dynamic Load Rating(Ca) of the accuracy C7 and Ct7 is 0.9Ca.

### Model number coding

**EP B 20 05 -6 QZ RR G0 +650L C3**

EP: Flange shape: A: round; B: double chamfered; C: single chamfered  
 B: Shaft diameter  
 20: Lead  
 05: Number of turns  
 -6: Clearance symbol  
 QZ: Seal symbol (RR : Labyrinth seal, WW : Wiper ring.)  
 RR: With QZ Lubricator (no symbol without QZ Lubricator)  
 G0: Ball screw shaft length (mm)  
 +650L: Accuracy symbol  
 C3: Nut type: offset preloaded type

## DIN Standard compliant Ball Screw (DIN69051)

Unit: mm

Nut dimensions											
Outer diameter	Flange diameter	Overall length					Hole type	PCD	d <sub>1</sub>	Tm	Greasing hole
D	D <sub>1</sub>	L <sub>1</sub>	H	B <sub>1</sub>	B <sub>2</sub>						A
28	48	65	10	50	12		1	38	5.5	20	M6×1
36	58	66	10	51	12		1	47	6.6	22	M6×1
40	62	66	10	51	12		1	51	6.6	24	M6×1
40	62	85	10	70	18		1	51	6.6	24	M6×1
50	80	67	12	50	12		1	65	9	31	M6×1
50	80	78	12	61	12		1	65	9	31	M6×1
50	80	112	12	95	18		1	65	9	31	M6×1
63	93	70	14	51	12		2	78	9	35	M8×1
63	93	114	14	95	18		2	78	9	35	M8×1
63	93	138	14	119	18		2	78	9	35	M8×1
75	110	140	16	119	18		2	93	11	42.5	M8×1
90	125	142	18	119	18		2	108	11	47.5	M8×1

Note) The rigidity values in the table represent spring constants each obtained from the load and the elastic deformation when providing a preload 8% of the basic dynamic load rating (Ca) and applying an axial load three times greater than the preload. These values do not include the rigidity of the components related to mounting the nut. Therefore, it is normally appropriate to regard roughly 80% of the value in the table as the actual value.

If the applied preload (Fa0) is not 0.08 Ca, the rigidity value (K<sub>n</sub>) is obtained from the following equation.

$$K_n = K \left( \frac{Fa0}{0.08Ca} \right)^{\frac{1}{3}}$$

K: Rigidity value in the dimensional table.

## Model EPC (Offset Preload Type)

Hole type 1  
(Model EPC1605 to 3210)

Hole type 2  
(Model EPC4005 to 6310)

Model No.	Screw shaft outer diameter d	Lead ℓ	Ball center-to-center diameter dp	Thread minor diameter dc	No. of loaded circuits Rows x turns	Basic load rating		Rigidity K N/μm
						Ca*	Ca	
EPC 1605-6	16	5	16.75	13.1	3×1	9.3	13.1	317
EPC 2005-6	20	5	20.75	17.1	3×1	10.6	17.3	310
